

Heavy-Duty Rock Head

with Replaceable Carbide Cutter Bits

Triple D's 2" Heavy-duty Rock Head is manufactured from 4140 chromemoly steel and designed with replaceable carbide cutting bits for use in hard clays, hardpan, shale and root impregnated soils. The Modular Rock Head is available in all popular shank sizes: 13/16" Hex, 1" Hex, 7/8" Ditch Witch Hex and 7/8" Case/Astec Hex.

To replace worn-out bits, simply remove the retaining pin, exchange the bits, and reinstall the retaining pin - it's that easy.

To prolong bit life and remove millings from the bore hole, it is recommended that a Triple D lead-auger section be used with the rock head.

HEAVY DUTY ROCK HEAD
